

VCC Session Summary

Attendance, Check-in & Mobile API Docs — Hare Krishna Movement Visakhapatnam

August 12, 2026 · All work committed & pushed

1. What was accomplished

Completed the **volunteer attendance feature** end-to-end, per the plan: volunteers check themselves in at the venue via a printed QR, attendance is tracked **per day** and **per event**, and admins manage it all from a dedicated screen. Also delivered shareable API documentation for the mobile team.

- **Venue QR check-in** — public page (`/check-in/:eventId` , no login): scan QR → enter phone → **confirm identity** (name + photo + seva) → pick the **day** → confirm attendance.
- **Per-day attendance** — a multi-day festival records one entry per day the volunteer attends (`dayAttendance` on the registration).
- **Admin attendance page** (`/admin/attendance`) — event + day selectors, per-day stats, check-in / no-show / undo actions, assign seva on the spot, and a check-in QR button.
- **Rule updates** — any registered volunteer can check in; a no-show volunteer who scans the QR is recorded as attended; mistaken check-ins/no-shows can be undone; service coordinators can mark attendance.
- **Mobile team docs** — dedicated API docs (Markdown, HTML, PDF) for Register, My Seva, time slots, and check-in.

2. The volunteer check-in flow

```
Venue QR → /check-in/<EVENT_CODE>
└ Volunteer enters registered phone number
  └ "Is this you?" – name, photo, assigned seva
    └ Pick the day (chips, defaults to today)
      └ Confirm Attendance → day recorded
```

Any volunteer with a registration can check in — even without an assigned service. The admin sees who is present and assigns sevas on the spot.

3. Files created & changed

File	Change
<code>app/api/events/public/[eventId]/check-in/route.ts</code>	New — GET identity lookup + POST per-day confirm (no-show override, idempotent per day)
<code>app/check-in/[eventId]/page.tsx</code>	New — public check-in page with identity confirm + day selector
<code>components/check-in-qr.tsx</code>	New — QR generator with copyable link (admin dialogs)
<code>app/api/registrations/[id]/attendance/route.ts</code>	New — admin per-day attendance (attended / no_show / unmark)
<code>app/api/stats/events/route.ts</code>	New — lightweight event list for the attendance screen
<code>lib/utils/event-days.ts</code>	New — event-day computation & date validation helpers
<code>lib/models/registration.model.ts</code>	Changed — added <code>dayAttendance</code> field
<code>app/api/registrations/[id]/status/route.ts</code>	Changed — undo transitions + service-coordinator access
<code>app/admin/attendance/page.tsx</code>	Changed — reworked to per-day view with assignment + undo + QR
<code>app/admin/events/[id]/page.tsx</code>	Changed — added Check-in QR dialog
<code>API-DOCS.md</code> / <code>.html</code>	Changed — per-day check-in flow, v1.2
<code>CHECK-IN-API.md</code> , <code>MOBILE-APP-API.md/.html/.pdf</code>	New — mobile-team API documentation

CHANGELOG.md , README.md , package.json

Changed — changelog entries, endpoint list, qrcode dependency

4. Commits pushed to GitHub

Hash	Commit
c50bbf0	docs: document time-slots endpoint in mobile API docs and regenerate PDF
e4e43b3	docs: add PDF of Register & My Seva API doc for the mobile team
1cfce14	docs: regenerate check-in section in API-DOCS.html for per-day flow
003e979	docs: add shareable HTML version of the Register & My Seva API doc
e35dfd5	feat: venue QR check-in with per-day attendance tracking (18 files, +2179)

Repository: github.com/HkmVizagTech/VCC-client · branch `main` · deployed at vcc-client.vercel.app

5. Public API surface (mobile app + harekrishnavizag.org)

Method	Endpoint	Purpose
GET	<code>/api/events/public</code>	List events
GET	<code>/api/events/public/:eventId</code>	Event details (+ <code>availabilitySlots</code> , custom fields)
GET	<code>/api/events/public/:eventId/time-slots</code>	Availability slots from the admin-created event
POST	<code>/api/events/public/:eventId/register</code>	Register a volunteer (mobile app + website)
GET	<code>/api/events/public/:eventId/check-in?phone=</code>	Identity lookup before check-in

POST	<code>/api/events/public/:eventId/check-in</code>	Confirm attendance for a day
GET	<code>/api/volunteers/by-phone/:phone</code>	My Seva — profile + assignments
POST	<code>/api/upload/photo</code>	Volunteer photo upload → <code>photoKey</code>
PUT	<code>/api/registrations/:id/attendance</code>	Admin per-day attendance marking (admin)

6. Mobile-team deliverables

- **MOBILE-APP-API.pdf** — Register, My Seva, and time slots (3 calls) — share this one
- **MOBILE-APP-API.html / .md** — same content, web-friendly
- **CHECK-IN-API.md** — the two check-in calls (identity lookup + per-day confirm)
- **API-DOCS.html / .md** — full reference (v1.2)

7. Notes & possible next steps

- Volunteers self-check-in via the QR page (**no login**); the admin page is login-protected by design.
- Existing registrations (before `dayAttendance`) work fine — per-day history starts from now.
- Possible additions: generic `/check-in` event-picker page, check-in timestamps on My Seva, attendance matrix report.

All validations passed before pushing: TypeScript  · ESLint  (0 errors) · Next.js build .
